PowerMills. Improving on what nature does naturally.  
PowerMills. Improving on what nature does naturally.

**Spot Control**  
Provides tight spot pattern minimizing stray light.

**Three-dimensional**  
Twin element tracking of the grill allows progress to adjust on local spot area patches.

**The G4 Superior**  
ventilation and thermal design eliminates power-waste temperatures that allow maintenance time on existing products.

Contact PowerMills or DADCO today and start improving on what nature does naturally.

## G4 24/18/12kW HMI Light by POWERMILLS

Precision extruded air vents provide over 50% greater air flow volume than cased products.

Patterned after engine nacelles on jet aircraft, the extremely strong dual-walled forward cowling blocks stray light.

Unique diffusion ear design is retractable, reducing storage volume in transit.

Customized handles on the rear make lifting and handling easy.

Motorcycle racing fenders provide the inspiration for the unique undercarriage.

*The G4 has been configured to accept the new 24kW Bulb.*

*Contact either PowerMILLS or DADCO for information regarding availability.*
